Updated:	02/25/2013	Due date:	
Description:	<p>Hey guys figured you might see it better here. i downloaded a nightly that was supposed to add support for d2mtr. rom boots and goes to a verizon activation screen. also in your carrier selection script you have a few issues as well as the build.prop</p> <pre>/sbin/busybox echo T999UVDLJA >/system/CSCVersion.dat;</pre> <p>should instead read:</p> <pre>/sbin/busybox echo R530MQVALL1 >/system/CSCVersion.dat;</pre> <p>we dont use verizon apps, the SCH-R530 family is comprised of d2usc, d2cri, and d2mtr. the d2cri requires its own special kernel due to camera hardware differences.</p> <p>Our stock software was LJ1, we have a leaked 4.1.2 tar that is LL1 im attaching a fixed build.prop for you guys and apns-config.xml since the one you guys included in the d2mtr folder dont even have metropcs in them</p>
